

Cloud Storage Apps

Highlight Feature

- > The cloud storage acts as central information repository for users to directly scan to and print from OneDrive, Google Drive and Dropbox via Toshiba's e-BRIDGE Next MFPs.
- > The embedded OCR converts documents to Microsoft Office file formats and searchable PDF files, making it easy to find the necessary information from a large amount of electronic data.

Your Challenges

The working environment is constantly evolving towards a paperless office by digitising hardcopy documents. However, cloud storage users are demanding an application that simplifies workflow and allows them direct access to print and scan via the MFPs without operating mobile devices and computers.

Our Solution

Toshiba's cloud storage apps are a convenient and hassle-free approach which act as a bridge between the electronic documents in the cloud storage with the MFPs. Users are able to access documents easily from the cloud storage to print or scan with Toshiba e-BRIDGE Next MFPs.

CLOUD STORAGE APPS

Your Benefits

The total cost of ownership is important to help users determine their needs of investing in additional hardware. Thus, Toshiba introduces these cloud storage apps to significantly reduce the total cost of ownership as no additional server needs to be maintained in each office.

With this easy solution, users can scan and store paper documents in the cloud when operating the MFP. Additionally, it also enables users to direct print and share electronic documents anytime, anywhere without limitation even while away from the desk.

Where to Use

Toshiba Cloud Storage Apps¹⁾ can be integrated seamlessly with the latest Toshiba MFPs in the following settings:

- > Business Centres (i.e. convenience stores, print services)
 - Reduce TCO, diversify business
- > Shared or mutual services
 - Accessibility, simplified workflow
 - Remote data sharing among branch offices

¹⁾ e-BRIDGE Plus for Google Drive, e-BRIDGE Plus for OneDrive and e-BRIDGE Plus for Dropbox
