

Embedded OCR

Highlight Feature

- > Toshiba's Embedded Optical Character Recognition is a tool for easy conversion of hard copies into electronic formats, which are searchable and editable.
- > Create searchable electronic documents which allow you to use keywords to find specific information in the document.
- > Perfect for modern business with off-premise or cloud-hosted IT infrastructure.

Your challenge

Very often you need to find information in a document which is only available as hard copy. Unfortunately, it is not always possible to get hold of the original source files. Therefore you have to search the entire document manually, which is not only a lot work, but also error-prone.

Our solution

Toshiba's Embedded Optical Character Recognition (OCR) is an option which offers an intuitive user experience which makes document creation, editing and management easy and convenient. Extract basic text from hard copies and convert it into electronic formats, e.g. DOCX or XLSX, has never been easier. And by using industry-standard formats such as PDF and PDF/A you can even create searchable documents, which helps you find and/or retrieve them faster from your document management system at a later stage. The Embedded OCR option is available for all Toshiba e-BRIDGE Next models.

EMBEDDED OCR

Your benefits

The Embedded OCR is an option which will save you lots of time. Existing hard copies can now easily be converted into formats from which you can extract text or archive as a searchable document. With the help of keywords you can now easily find specific information even in larger documents.

The OCR not only creates editable formats, it also automatically generates searchable document formats, such as PDF, PDF/A, Secure PDF and Slim PDF. It also makes sharing documents easy: you can save and share your files within your network (via SMB/FTP) and via e-mail, or store them on a USB drive, on the MFP itself or even to cloud-based services, such as Microsoft OneDrive, Google Drive and Dropbox. It therefore is an ideal option for businesses with modern workflows which rely on mobile printing.

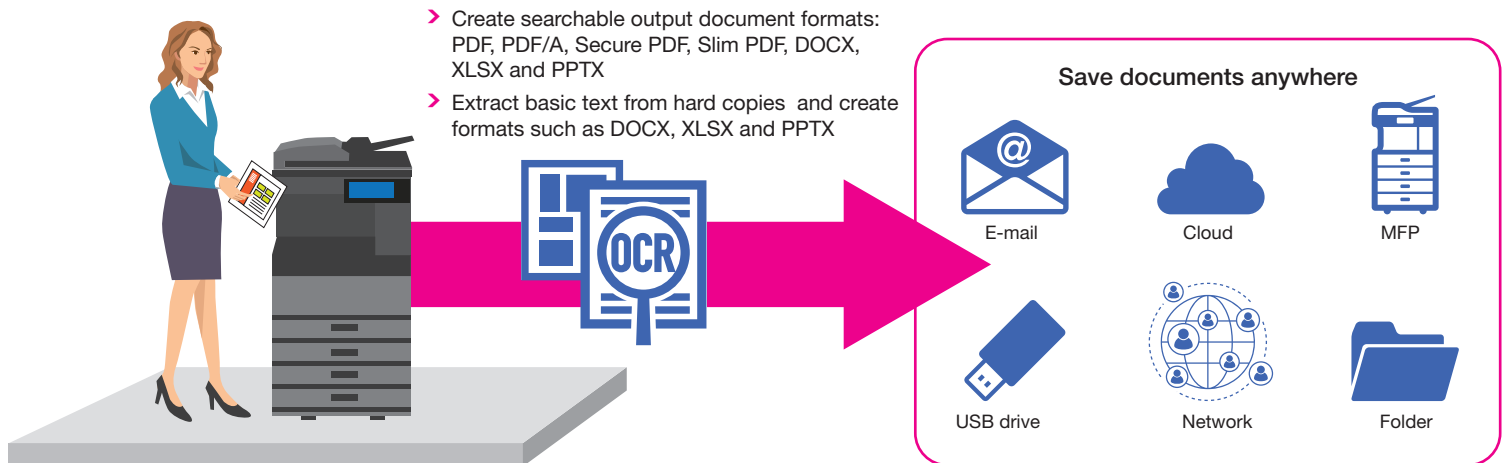

The OCR solution is embedded in the MFP, so there is no need to install an additional server, which makes it ideal for businesses with an off-premise infrastructure and host environment.

Where to use

The Embedded OCR option is suitable for all businesses wanting to work more efficiently with their documents.

- > Legal
 - Convert hard copies which you receive, e.g. from clients or the opposing party, into searchable file formats to add them to your electronic archiving system.
- > Education
 - Scan your converted documents directly to the cloud or e-mail them directly to your students and/or colleagues.
- > General Office
 - Eliminate the time-consuming and error-prone task of re-typing documents

The Embedded OCR option is available as single licence or as five-licences package and works on all Toshiba e-BRIDGE Next models.
