Project Code

Highlight Feature

> Full transparency of all costs related to print, scan, copy and fax.

> Easy cost allocation per client or project.

> Intuitive usage, which eliminates labourious administrative task.

Your challenge
When dealing with multiple clients or projects at the same time it is difficult keeping track of which costs are related to which client or project. Usually it takes painstaking manual tracking and allocating to get the full overview.

Our solution
Toshiba's easy-to-use Project Code feature keeps track of all your prints, scans, copies and faxes and allocates the related costs accordingly. Up to 100 projects or clients can be monitored by the Toshiba e-BRIDGE Next MFP, which saves you valuable time.

The same code can be used in different departments and on different MFPs. So no matter who prints, scans or copies something within the company, costs will be allocated to the correct project or client.

TOGETHER INFORMATION

Your benefits

By using the Project Code feature you can easily allocate the costs of your print, scan, copy or fax to up to 100 different projects or clients per MFP.

Simply enter the pre-defined project code in the printer driver or on the control panel before releasing your job. The MFP will keep track of the costs and help you allocate them to the correct project or client. Project codes managed as logs in the MFP can be aggregated even if several users use the same code in several MFPs. You are able to have full cost transparency, allowing you to issue accurate invoices or calculate the ROI of a project.
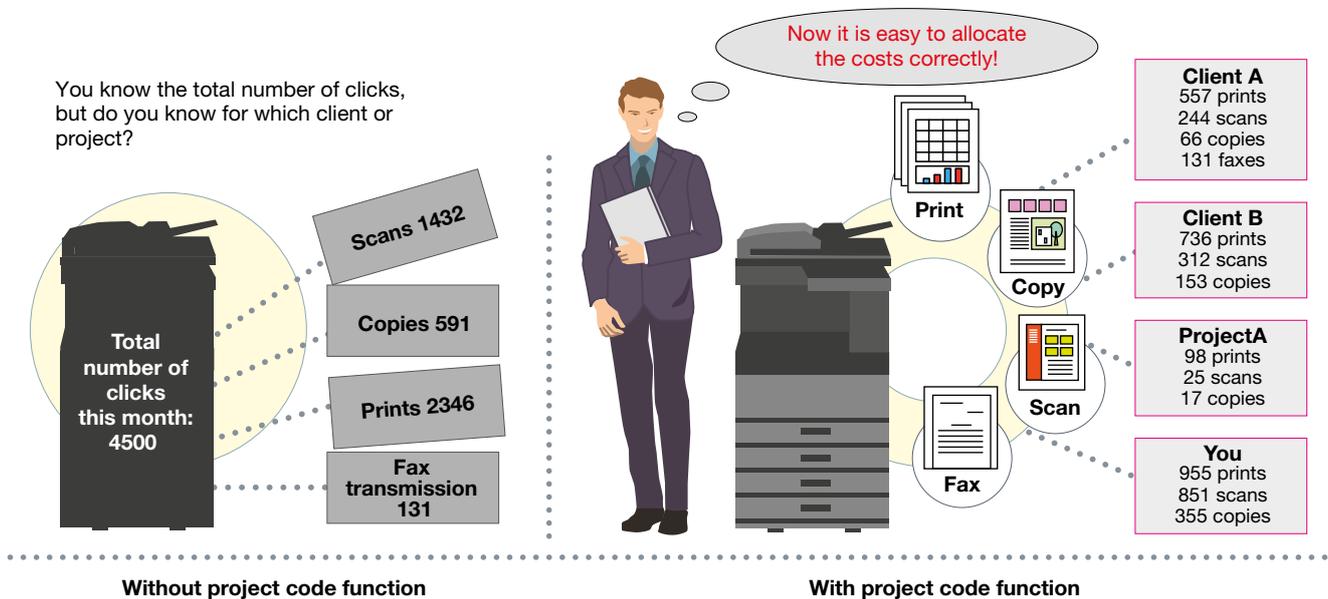

Of course, you can also track internal costs by department or private usage via the user authentication.

Where to use

Any company which deals with multiple customers or projects at the same time, needs to be able to track the exact costs related to each of these clients or projects.

› Law firms
  – Allocate costs per client
› Advertising agencies
  – Allocate costs per project
› Retail stores
  – Calculate ROI of promotion (e.g. costs of printing flyers)

The project code feature helps you get a clear overview of costs - either per client, for accurate invoicing or per project, to calculate the return on investment.

You know the total number of clicks, but do you know for which client or project?

Scans 1432

Copies 591

Prints 2346

Fax transmission 131

Total number of clicks this month: 4500

Without project code function

Now it is easy to allocate the costs correctly!

Print

Copy

Scan

Fax

Client A
557 prints
244 scans
66 copies
131 faxes

Client B
736 prints
312 scans
153 copies

ProjectA
98 prints
25 scans
17 copies

You
955 prints
851 scans
355 copies

With project code function
