

## Highlight Feature

- > Toshiba's e-BRIDGE Plus for Green Information app helps you track the environmental contribution of up to ten multifunction printers
- > View all the relevant statistics at a glance and see your progress.
- > Motivate people to use environmental-friendly settings to improve your company's carbon footprint.

### Your challenge

Reducing paper consumption is one of many ways to improve a company's carbon footprint. Toshiba's regular multifunction printers (MFPs) come with various features, which help you achieve your goals. But how can you see if you reach these? Do you know which department contributes most? And how do you motivate users to contribute to the common goal you want to reach?

Visualising your goals and achievements would help underline the green message your company wants to spread.

### Our solution

Toshiba offers a range of apps which work with all e-BRIDGE Next MFP systems. One of these is the e-BRIDGE Plus for Green Information app. This tool is an easy way to visualise your green efforts. It collects the information from up to ten different devices within your network and displays it as graphs on the control panel. If needed, you can also export the data.

### Your benefits

The e-BRIDGE Plus for Green Information automatically collects data from up to ten MFPs and/or Paper Reusing Devices (PRD) within your network and displays to green achievements as graphs on the devices user interface.

It not only shows how many sheets have been used in total, but also the Duplex and N-in-1 ratio. In addition the app also collects the paper reuse rate for sheets processed on Toshiba's unique Hybrid MFP and paper reusing device. The graphs then show which percentage of the individually set company goals has already been achieved.

The app is very easy to administrate and gives a comprehensive overview of the green usage. Based on the data, administrators or environmental officers can recommend further activities to increase the usage of green features.

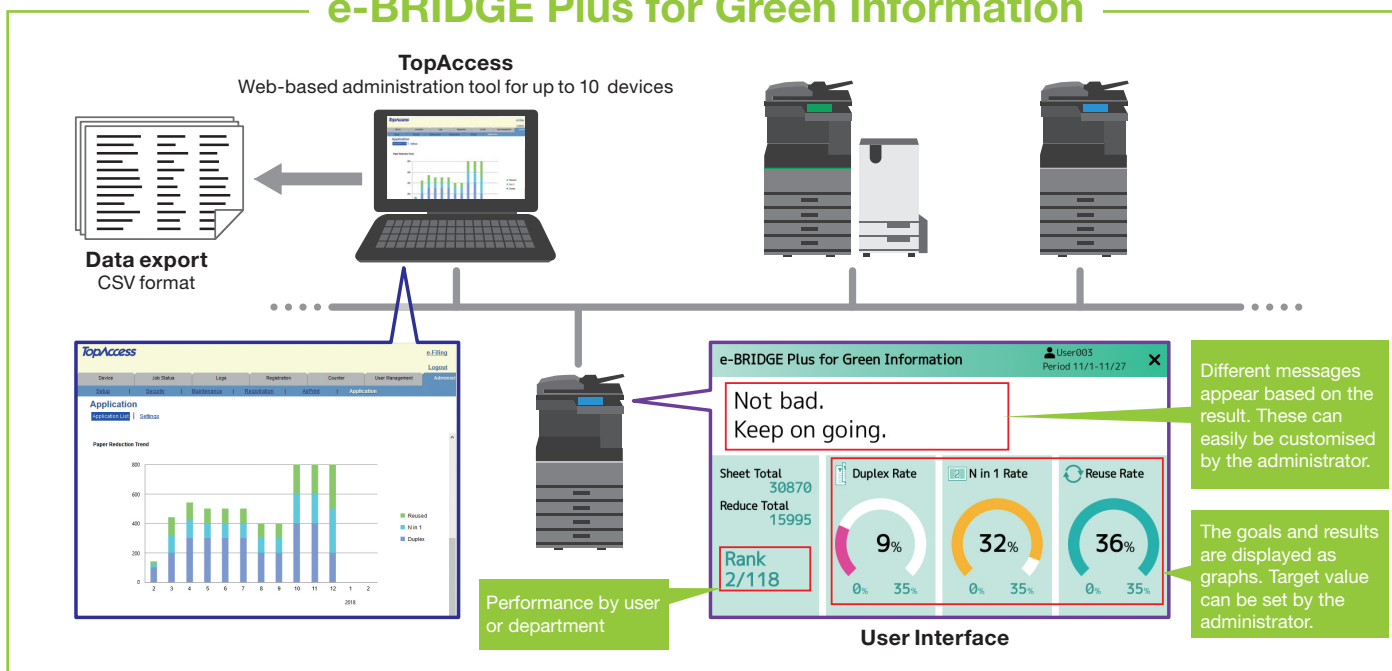

### Where to use

e-BRIDGE Plus for Green Information is the ideal app for companies which want to encourage their employees to utilise paper saving features such as duplex printing or reuse of paper.

#### > General office

- Show the green usage of up to ten MFPs or Paper Reusing Devices within the network
- Set company goals and show how much the employees have already contributed.
- Analyse where there is room for improvement to further reduce the company's carbon footprint.
